FARM STOCK

GIVE FARM ANIMALS CHANCE

Fault of Farmer if Stock Fails to Make Profit—Opportunities Must Be Created for Them.

It isn't the fault of your stock if they fail to make a profit for you. They live up to their opportunities. How few men do!

If the pig fails to grow, it is because you have not let him. If the calf gets pot-bellied, it is not his fault. If the colt is wild and shy, is it his fault or yours? If the lamb is a scabby, ticky, good-for-nothing specimen, don't blame the lamb. If the chickens mope around with wings trailing, sit in judgment on their keeper.

The pig will use every opportunity for growth you offer. See how quickly he finds and uses a hole in the fence so he can get greener pasture. The calf will grow into a prime baby beef or fine dairy cow if you give the opportunity. The colt will be fearless and safe if you introduce him sensibly to all sorts of peculiar noises and

Chester White pigs. They are good grazers.

sights. Give him the opportunity to see the world while yet a youngster. The lamb will be a frisky ball of wool and mutton if you help him get rid of the things that pester him. Give him a fair show. The chicks will grow into morning glories and cackles in a short time if they have a decent place to live in and are given the opportunity to develop.

Create opportunities for the stock that are dependent upon you. Give them a fair show and they will show you what nature does with an opportunity.

KEEPING EWES' FLEECE DRY

Of Great Importance That Sheep Be Protected From Winter Rains—Salt and Water Essential.

The protection of breeding ewes from falling snow is important, especially if it is important when it falls in the form of rain. Winter rains and also sleet are always cold. If sheep of the open-wool breed are long exposed to these they may do great harm. The closed-wool breed, as the merinos, will be harmed much less, as the water cannot readily enter the wool that they carry. The shelter provided up to the lambing season may be of the simplest kind, providing it will protect from storms and rains.

The aim should be to give the breeding ewes large liberty in winter, if the ground is bare, or even partially, for it will do them good to give them large liberty. They will make excursions to the fields in search of grass, and the exercise will do them much good. They should be allowed to lie in a well bedded yard at night, in a shed or house adjoining, as they prefer.

The other necessary attentions include regular feeding, a supply of salt at all times accessible, and an ample supply of pure water and a yard apart from those of horses and cattle.

LIVE STOCK NOTES

Feeding racks will pay for themselves in the long run.

Timothy fed alone is constipating, and that means trouble for the sheep.

There is no sense or profit in feeding hogs or pigs after they are fit to kill.

The price of pork should convince any person that there is profit in good hogs.

Each horse should be carefully studied and given what he requires for his health.

Every horse should be cleaned twice each year, spring and fall, and road horses more often.

There can be a great saving of hay this coming winter, on many farms, by not stuffing the horses.

Many a gelding is dosed for "kidney trouble," when the real cause of his condition is foul sheath.

The fall pig that goes into the winter in a weak, run-down condition has a life of misery ahead of him.

In making pens for winter use, do not build on too big a scale. A few hogs in a pen will do better than too many.

POULTRY FACTS

WHITE LEGHORNS FOR EGGS

Good Strain of Breed With Good Care and Fed Ration Given Here—with Will Prove Profitable.

(By J. H. ELSTON, Caldwell, Idaho.) The man or woman who has decided to go into the poultry business will make no mistake in selecting the Single Comb White Leghorn, especially if he wishes to follow the branch devoted to egg farming, with the sale of breeding stock and eggs for hatching.

There is a decided difference in White Leghorns. Those that are blue-bred for exhibition purposes only, are seldom the large, hardy, persistent layers as those selected and bred for egg production, but standard qualifications need not and should not be neglected even if our aim is a greater production of eggs.

In securing eggs when prices are high, the housing and feeding plays an important part. We should have good warm houses with plenty of fresh air, with plenty of room for exercise, as a busy hen is the one that fills the egg basket. They are inexpensive, three sides and roof covered

Prize Winning White Leghorn Cock.

with prepared roofing which makes them wind and rain proof. The south side has a curtain front, the curtain being closed only on cold nights.

In winter I feed grain morning and night scattered in a heavy straw litter on the floor. The exercise of scratching for the grain in early morning warms the birds and they are hungry and in good shape for a dinner of the warm mash. The mash has for a base alfalfa, chopped fine and steamed; with this is mixed wheat bran, ground oats, and wheat and corn to which is added meat meal, whenever possible milk is also added. About twice a week boiled potatoes are used in place of the alfalfa.

If one has a good strain of White Leghorns with proper care and feed the above ration they should have a good supply of winter eggs.

CULLING MAKES FINE FOWLS

Runts and Deformed Birds Should Be Disposed of Immediately to Make Room for Good Ones.

The first great secret in the production of fine poultry is severe culling. As soon as you can distinguish between the good and the bad, commence the culling process. The runts and the deformed, the off-colored and the disqualified, should be at once disposed of, so that the room and feed may not be appropriated by them to the detriment of the good ones.

Select fowls of good size, proper color and correct formation. If the backs, keels, legs or toes of any are crooked or deformed, throw them out for the table on the market. If there are any scrubs, small or feeble ones, it is best to end their existence. When you cull, cull closely, and retain only such specimens as are reasonably sure to grow right. It is only by such systems of severe culling that one can ever hope to breed reasonably uniform specimens of fancy poultry.

Spread of Contagion.

Drinking water in poultry houses is one cause of the rapid spread of contagious diseases, such as roup. An affected hen when she places her beak in the water to get a drink, contaminates all the water. Then, when healthy hens drink from this water supply they become exposed to whatever disease the sick hen has. Thus, when one fowl contracts a contagious disease it generally is but a comparatively short time until there is a general outbreak of the affection, unless precautions are taken.

Prevention Is Cheapest.

Eradicating a contagious disease from a poultry flock is a tedious and costly process. The best way is to prevent the outbreak in the first place by keeping the buildings clean and sanitary. When a fowl gets sick, if it is not killed it should be isolated and the remainder of the flock closely watched for signs of further trouble.

DAIRY

PRODUCE CLEAN MILK

Sanitary Conditions Are Factors of First Importance.

Unless Some Precaution Is Taken at Milking Time, Dirt and Dust Will Be Sure to Fall into Pail or Receptacle.

(By I. H. FRANKSON.) It is not easy to say just what is the most important feature in the production of clean milk. Special stress may be placed upon some particular step, yet if carelessness is allowed to rule at other steps much of the most painstaking care would count for naught in the final results.

Clean and sanitary conditions are factors of first importance upon which too much stress cannot be laid. It is impossible to produce good milk or good cream if dirt of any kind is allowed to get into it. Unless some pre-

Children Caring for Milk and Utensils.

caution is taken at milking time, dirt and dust will be sure to fall into the milk from the flanks and udder of the cow. The greater part of this filthy matter dissolves in the milk, giving it not only undesirable odors and taints but also inoculating it with bacterial germs.

These germs may have been gathered from water, muddy pools or mirey yards. While the majority of them may not be disease-producing or especially harmful should they be transmitted to the human system, yet to say the least, they are factors in bringing about decomposition of the milk. Filth and disease germs go hand in hand; the same carelessness that allows the one is likely to give access to the other. Hence, it is of the highest importance that the cow be kept as nearly clean as possible. This can be accomplished largely by brushing off all the loose dirt and dust from the flanks and udder but, if at all convenient, it is even better to wipe the udder with a damp cloth. This will take but a moment and will prevent large quantities of filth from getting into the milk.

The milkster interested in a pure, wholesome product should insist on wearing a special suit while milking. This suit need not be a white one, but such a one has the advantages of at least showing when it has become soiled, and furthermore, if the milkster is to keep everything about him clean. The warm milk as it comes from the cow offers a splendid medium for the favorable growth of all kinds of bacteria which may gain access to it. In order to lessen this development milking should be done as carefully and quickly as possible and the milk strained through a metallic strainer for even under good conditions this soon becomes a hot-bed for bacteria. Milk bottles are frequently returned from homes where contagious diseases exist. To prevent the spread of epidemics, the important work of washing milk utensils should not be entrusted to little children.

WEST VIRGINIA DAIRY COWS

Quite a Few Holsteins Have Been Added and Grading Will Be Replaced in Due Time.

The dairy department of the College of Agriculture of West Virginia is building up a new herd of cattle at the university farm. The herd previously kept at the farm were grades and many of them were getting quite old and unprofitable. Quite a few pure bred Holsteins have been added to the herd and the old herd will be fully replaced by them in course of time. The dairy department has also installed at the university a modern buttermaking equipment and will purchase cream from the farmers of the northern sections of the state and high grade creamery products will be made. This will be quite an instructive feature to the agricultural students.

Loss in Hurrying.

Hurrying the cow checks the flow of milk. Some cows do not get over it till too late for them to give down before milking is over. That means your loss.

Dairy Aids Fertility.

While grain raising depletes the fertility of the farm, the dairy is a sure agency to replace it. If judgment is used in applying the manure back to the soil.

MINERAL CONTENT OF APPLES

Department of Agricultural Chemistry of the Idaho Station Gives Results of Experiments.

Fruit of all kinds that grow on plants which receive the largest portion of their food supply through the soil, always contain a rather large amount of mineral substances.

In the apple, for example, it has been found by work carried on in the department of agricultural chemistry of the Idaho station that the ash amounts from 2 to 35 per cent, of the fresh mature fruit. This total ash is obtained by drying a suitable quantity (3-5 pounds) of the quartered apples at a degree of about 40 degrees C, for several days, and then burning it in an electrical furnace at a dull red heat until practically all the carbon is consumed. The total amount apparently does not vary to any great extent with varieties or with irrigation or non-irrigation.

When this ash, which, from the majority of varieties is perfectly white, is further subjected to analyses, the following are the most important elements found: Silicic acid, iron, aluminum, phosphorus, manganese, calcium, magnesium, potassium, chlorine and sulphur.

Although no one has been able to determine the exact function of these various elements in plants and fruits, it is generally believed that sulphur and phosphorus enter into the living substance; that potassium, magnesium, calcium and iron, although not entering into the living substance, are essential, but owing to the fact that they are so widely distributed in the soil, are absorbed by the root-hairs of the tree, and find their way to the fruit through the tree sap.

NOTES OF FARM AND GARDEN

Intelligent Diversification Requires Place and Purpose for Every Crop—Other Good Hints.

Diversified farming does not mean diversification for the sake of variety. It requires that there be a place and a purpose for every crop grown, and that the crop be adapted to the purpose for which it is grown. This is intelligent diversification.

Leaves and other vegetable matter may be raked and piled up where it will rot and be handy to use as fertilizer next spring.

The germ of seed corn lies in the tip of the kernel. Broad, well-filled tips indicate strong germs.

An acre of alfalfa yields 5,280 pounds

Admiral Togo Muskmelon.

of digestible matter; red clover, 3,200 pounds, and corn, 2,800 pounds.

Cut out and burn all the dead canes in the blackberry and raspberry bushes.

Fruit trees that have been planted late must be tied to stakes with broad bands.

In handling fruit, careful and systematic sorting is of the greatest importance.

Cabbages hung up by the roots in the cellar will keep for two or three months.

Too much water in the soil prevents the deep root development of plants. There is a great deal of humanity in axle grease.

Corn has been successfully and profitably utilized by permitting the hogs to harvest the crop.

Honey is not only a healthful but a "tasty" food.

The common wild elder has been furnishing an abundance of fruit for pies and jelly this season, besides being an attractive ornamental bush.

TO EXTERMINATE THE MITES

Task May Be Performed by Use of Lice-Killing Liquid or Kerosene and by Burning Sulphur.

Mites are the smallest kind of lice and are so small that they quite often escape notice. They live on the fowls at night, but leave in the morning and hide in the woodwork of the hen house, particularly the roosts, nests and nearby woodwork. The way to exterminate them is to paint the insides of the nests, the roosts and the roost supports, etc., with some good lice-killing liquid every two weeks, or with kerosene once a week. Then drive the hens out doors on a warm afternoon, close the house up tight and burn enough sulphur in it to fill the building absolutely full of dense blue fumes and keep it closed for an hour or two. These fumes will get all through the house, into the cracks, etc., and will kill the mites. This should be repeated a week later.

Signs of Liver Troubles.

When the comb, wattles and face of fowl are pale, it is an indication that there is trouble with the liver.

A pill made out of baking-soda, about the size of a pea, will open the bowels. Then put a teaspoonful of powdered charcoal in a pint of mash, and reduce the food for a day or so. A one-grain quinine pill will furnish a needed tonic. Feed less grain and more green stuff.

OUT

They Go

CLEANING TIME

As filth flies before the broom, so do disease germs, effete and impure matter and foul humors in the blood fly before

ELECTRIC BRAND BITTERS

They can't stand against this matchless broom of the blood. Out they go, along with the troubles they cause, such as pimples, boils, sores, eczema, salt-rheum, malaria, rheumatism and kidney disorders. It makes a clean sweep. It cures quickly and cures to stay. It gives glorious health and vigor to the weak, sickly and run-down.

Saved Girl's Life

"I want to tell you what wonderful benefit I have received from the use of Theodor's Black-Draught," writes Mrs. Sylvania Woods, of Clifton Mills, Ky.

"It certainly has no equal for a gripe, bad colds, liver and stomach troubles. I firmly believe Black-Draught saved my little girl's life. When she had the measles, they went in on her, but one good dose of Theodor's Black-Draught made them break out, and she has had no more trouble. I shall never be without

THEODOR'S BLACK-DRAUGHT

in my home." For constipation, indigestion, headache, dizziness, malaria, chills and fever, biliousness, and all similar ailments, Theodor's Black-Draught has proved itself a safe, reliable, gentle and valuable remedy.

If you suffer from any of these complaints, try Black-Draught. It is a medicine of known merit. Seventy-five years of splendid success proves its value. Good for young and old. For sale everywhere. Price 25 cents.

PLEASANT thought for the day: Neither a pound of meat nor a dozen eggs costs as much as a pinch of radium.

PRESIDENT WILSON can now do his watchful waiting alone for awhile. The country is going to take a little nap.

If the Republican party had lived as it ought to have lived it would now be enjoying a larger funeral or revival or whatever the disturbance is.

PROVING the healthfulness of life free from toil and excitement, Weymouth, Mass. has a policeman 93 years old who has been fifty years on the force.

GEN. ROSALIE JONES has again mobilized her army and will march on Albany. After the capitulation of Albany we suggest that she march on Mexico City.

FACT that he has quit smoking will be a great relief to the friends of Joe Folk, who now may smoke a cigar in his presence without being held up for its mate.

It is not surprising that Austria has followed Germany in forbidding officers in uniform to dance the tango. Those uniforms are awfully tight and it would cost a lot of money to replace the split ones.

COL. ARTHUR YAGER, who has just been installed as governor of Porto Rico, has declared himself in favor of granting American citizenship to all residents of the island who desire it. Gov. Yager is a native of Kentucky, and was educated at Georgetown college, of which he afterward became president, a position he has held for the last five years. He is a member of many scientific societies and an author.

THE Grand Trunk-Pacific Railway, which will give a new continuous route from the Atlantic to the Pacific, through Canada, has been so far completed that there remains to be built only a gap of 220 miles, between Winnipeg and the Pacific Coast. On the mountain section over 600 miles of track have been completed, and the consulting engineer for the government states that as labor is abundant, the line will in all probability be finished by the first of June, 1914.

THAT George Washington was at one time engaged in surveying is well known; but it has remained for the modern engineer, working with the present instruments of precision, to show that in spite of the crude instruments of his day, Washington was a most careful and accurate surveyor. The attention which has recently been directed to this matter has called forth a widespread appreciation of the fact that he showed in this work of his youthful days many of those qualities which, in after life, served to make him one of the leading figures of his age.

Bringing Success Out of Failure.
Professor Massey said, lately: "One farmer writes: 'Stop my paper, we are able to pay for it.' Did the Professor ask him how much tobacco and snuff he and his wife used a month?"

I know you are wondering how much good you do. Supposing that you turn out 25, 50 or 75 good farmers out of your 140,000 subscribers every two years, to say nothing of the help and pleasure you are to each of the 140,000. I believe two or three years close study of your

Are You One Of Those Who Habitually Catch Cold?
Investigation Shows That Certain Occupations and Professions Are Constantly Prolific Causes For Frequent Colds. What Can Be Done About It?

We read a lot of medical literature that only entertains, but does not instruct. In this strenuous period, when life is put to such a severe strain, we need light and facts how to prevent disease more than talk that entertains. Do you know that the clerk and the shop girl, the merchant and the professional man, confined to sedentary work, are daily creating those conditions that conduce to colds?

Mental fatigue, worry, heavy strain, nervousness resulting from desk or store work are the easiest means for the development of colds. The average life of a clerk is less than that of a farmer—cause, sedentary work.

Sedentary life, especially where it means the consumption of brain tissue, often leads to over-eating; there is no more common cause of colds than over-eating.

When the digestive organs are weighed down with an excess of food, the liver and kidneys and other important vital organs are overworked, vitality is lower and there is less resistance; slight exposure, which under ordinary conditions causes no harm, results in a bad cold.

To relieve a cold, a good expectorant or cough remedy such as PERUNA should be conveniently at hand to be taken at the very first attack of the cold. But what can be done to stop the frequency of colds to such people that are confined to sedentary work?

Start with a cold water towel bath, walk to your place of business, or devote an hour of each day to outdoor life, take a dose of PERUNA before each meal to tone up your system, eat moderately, retire early and sleep in a room full of fresh air.

Mr. L. A. Richardson, a substantial druggist from Marine, Illinois, commenting on the merits of proprietary medicines, writes as follows: "I have been engaged in the retail drug business here for the past forty years. During this time I have seen many patent medicines come into use, flourish for one or two years and then gradually disappear. There are very few of these remedies that possess enough real merit to insure their long life. Peruna has always been a good seller with us, with a marked increase from year to year. The change in the formula some years ago, by the addition of the slightly laxative properties, has made it a reliable remedy for constipation and for colds. I take pleasure in urging my brother druggists to recommend it for these two ailments."

Those who wish to begin the cold water towel bath should have a copy of the *Ills of Life*. Sent free by the Peruna Co., Columbus, Ohio.

paper will make a first-class farmer, almost equal to a course at an A. & M. college. Is not this enough to warm you up and possibly cause you to try on a slightly larger hat at times. Don't be afraid to hammer. Keep on hammering away. You cannot tell for the life of you where the soil lies most fallow for your sowing.

Now as to what you have done for me. I kicked out of the traces of a \$100 job and "broke the bonds asunder" four years ago and began farming, the greenest that ever smashed a clod. Begun with two flop eared mules (I can never shrivel up enough to be a one-horse farmer), farmed for 10 months without a single cow. Lost one mule, one good mare, one \$40 heifer, one cow, two good brood sows, one good pig, two calves, \$600 or \$700 cash.

I now have one \$200 mare, one \$100 mare, one \$200 filly (both mares bred again), three milk cows, one heifer calf, one male calf, three registered Poland China gilts, one registered Poland China sow with six pigs, three fattening hogs, two grade pigs, 15 head in all; a crib full of corn, 350 gallons Ribbon cane syrup; six bales cotton, all accomplished by Yours Truly while trying to feed and clothe a family of four. Sixty-three acres (25 bottom, 38 upland) six-room house, big barn, all paid for. I do not write this in a boasting spirit, but to tell you it is a far cry from here to my starting point and to give you the encouragement you justly and rightly deserve, by telling you that you have been my counsellor and my guide, my hope and strength, for almost two years, and here I recall how you have been in a material way a light to my pathway and a guide to my faltering footsteps in the dark hours that have been mine. My heart goes out to you, across the fields and woodlands, the hills and valleys of this blessed Southland of yours and mine in gratitude. There have been some dark hours mixed with the sunshine and my aim in telling you of my ups and downs is to give hope to some other poor struggling one who may be treading the rough-hewn way.

Now for a rap at the man who says you are hard on the one horse farmers. I recall about last winter a subscriber complained at this. About the time last spring when you were preaching your best gospel to get men out of the one-horse line, and after I had lost about all I could lose, or had to lose and, to cap it all, one of my mares had died on me, I believe I would have felt compelled to fall back into the one-horse ranks, but for you. One of your best sermons came just in time to keep my head above water. As it was, in two hours after my mare died I was on my way home with another one to hitch up to my two-horse breaking plow, although I had to mortgage my unplanted cotton crop and milk cows to buy her.

Tom Williams Kills Wife and Self.

The many friends and relatives of Mr. Tom Williams and his wife in this county were shocked over their tragic deaths at Paducah some time last Sunday night. Williams killed his wife by shooting her in the head with a revolver and then committed suicide by turning the weapon on himself. The act was caused by despondency, it is thought, as for some time Williams had been out of employment. For many years he had held a position with the I. C. railroad, both as freight and passenger conductor. Lately he had served as a policeman in Paducah, but had resigned. He was one of the most cheerful and popular men, and the very last person one would have thought about doing such an act. The bodies were brought to Depoy, where interment was made Tuesday afternoon, and there was an immense audience. Two children, a boy and a girl, survive, and have the interest of everyone in their loss and grief.

Hon. R. Y. Thomas is spending the holiday vacation at home, and was here yesterday, shaking hands with friends. He will make a short tour of the district before he returns to Washington.

SYMPTOMS OF CONSUMPTION

Yield to Vinol.
The medical profession do not believe that consumption is inherited, but a person may inherit a weakness or tendency to that disease.

A prominent citizen of Evansville, Ind., writes: "I was ill for five months with pulmonary trouble, and had the best of doctors; I had hemorrhages and was in a very bad way. Through the advice of a friend I tried Vinol, and I feel that it saved my life. It is all you recommend it to be. I believe it is the greatest medicine on earth. I have advised others to try Vinol, and they have had the same results." (Name furnished on request.)

Vinol soothes and heals the inflamed surfaces and allays the cough. Vinol creates an appetite, strengthens the digestive organs and gives the patient strength to throw off incipient pulmonary diseases.

Try a bottle of Vinol with the understanding that your money will be refunded if it does not help you. G. E. COUNTZLER, Druggist.

Studebaker

"When I invest in a wagon I buy a Studebaker, then it's a safe investment"

Of course it is! Studebaker wagons are built on honor, with sixty years of wagon-building experience—and with every wagon goes a Studebaker guarantee.

You can't afford to have a dealer sell you some other wagon represented to be "just as good."

If you want a wagon that will last, run easily and stand up to its work, there is only one wagon to buy—and that's a Studebaker.

Don't trade ten extra years of service for a few dollars difference in price.

Studebaker wagons are made to fit every requirement of business or pleasure, in city, town or country.

Local Mention.

The Legislature is in session since Tuesday.

We have been having some murky weather.

Good Morning! Can you yet write it '14?

Coal mines are still running on short time.

Well, well! 1914 has Mondays in it, too!

New city and county officers are now in charge of affairs.

There is getting to be some trouble in negotiating the roads.

Mr. D. J. Duncan was in Louisville on business during the week.

Mr. Ed. S. Wood and wife will spend several weeks here, occupying the Shaver home.

Mrs. Cecil E. Roark made a short visit to South Carrollton relatives the latter part of the week.

Mr. J. A. Shaver and wife leave the first of the week for Florida, where they will spend the winter.

The A. S. of E. pooled tobacco is moving to some extent, and our streets are resuming old-time evidences of activity.

It is likely that large crowds will attend the winter term of circuit court, as farmers have some leisure time now.

Circuit court will convene here next Monday, and there is docket sufficient to occupy the full term of three weeks, it is thought.

Oh, you Calomel get out of the way and let LIV-VER-LAX do the work. Purely vegetable. Ask G. E. Countzler.

Bank Mules For Sale.

Mine mules, from 48 to 52 inches high, good ages and well broke. Write to Richard Leavell, Hopkinsville, Ky. 8t

The county board of tax supervisors convened Monday, and is busy putting new valuations on property which has been held in too low esteem by the owners.

Lost—Saturday, December 27, on North Main or East Main-cross street, a gold wire breast pin, with coral center, entwined with gold wire. Reward for return to this office.

Mr. S. E. Poag and Miss Nellie Hobbs, of this city, were married at 9 o'clock last Saturday night at the home of Rev. G. B. McDonald, who performed the ceremony in the presence of a few friends.

Mr. Robert Shaver, who has been in the sanatorium of the Modern Woodmen of America at Colorado Springs for some months, returned to his home near town last Thursday, and will remain here for the winter. He has improved in health, but did not fancy the Colorado winters.

Notice To Stock Holders.

There will be held at the office of the First National Bank of Greenville, Ky. on Tuesday January 13th 1914, between the hours of 10 am and 12 m, an election for the purpose of electing seven directors for the ensuing year. Jno. T. Reynolds, Jr., Secretary.

An article "Bringing Success Out of Failure," written by Mr. Harry R. Barkley, and published in the Progressive Farmer, will be found reproduced in these columns. Mr. Barkley is an old Greenville boy, but for the past decade or more has been in the Empire state, and is well pleased with the great Southwest, and doing his full share in its wonderful development.

Why be constipated when you can buy LIV-VER-LAX from G. E. Countzler.

Death of Mrs. W. H. Woodson.

Cordelia, wife of Rev. W. H. Woodson, died at 3:30 o'clock last Friday afternoon at their home in this city, after an illness of a year from chronic diarrhea. For some time it had been realized that she could not recover, but she had apparently gained somewhat, recently, and her death was unexpected. Deceased was a woman of many fine traits, and was active not only in her home but had aided her husband much in his work. She was widely known throughout the county, and held in highest regard by all. Funeral services were held at the Baptist church at 1:30 o'clock Sunday afternoon, the pastor, Rev. Tandy, delivering the address, and interment was made in Evergreen cemetery, many relatives and friends attending both services. The husband and six children have the sincere interest and sympathy of our people, in this, their great loss.

Notice.

Campbell Howard and W. H. Gray, constituting the law firm of Howard & Gray will, on and after Jan. 1, 1914, continue the practice of law, as partners in civil business, only.

This December 31, 1913.

Campbell Howard,
W. H. Gray.

Changes in Weight Limit and Postage Rates for Fourth-Class Matter.

On and after January 1, 1914, the limit of weight of parcels of fourth-class mail for delivery within the first and second zones shall be increased from 20 to 30 pounds and in the third, fourth, fifth, sixth, seventh, and eighth zones from 11 to 20 pounds.

The rate of postage on parcels exceeding 4 ounces in weight in the third, fourth, fifth, and sixth zones shall be as follows:

Third Zone.—Six cents for the first pound and two cents for each additional pound or fraction thereof.

Fourth Zone.—Seven cents for the first pound and four cents for each additional pound or fraction thereof.

Fifth Zone.—Eight cents for the first pound and six cents for each additional pound or fraction thereof.

Sixth Zone.—Nine cents for the first pound and eight cents for each additional pound or fraction thereof.

All regulations or parts of regulations in conflict herewith are hereby rescinded.

No changes have been made in the size of packages.

Two Tracts of Land For Sale.

I have for sale one tract of 37 acres of land, on Pond Creek, 5 miles South of town. Also a tract of 108 acres, known as A. E. Newman farm, on Bat East Creek, 5 1-2 miles from town. Prospective buyers can meet me in Greenville on Monday, January 27, 1914, or address me at Madisonville, Ky. 3t. S. A. Heltsley.

New Councilmen in Charge

The city now has a set of new councilmen, Messrs. J. A. Shaver, W. E. Drake, J. B. Tunstall, John F. Shutt, J. W. Newman and John Walton having qualified Monday night. Judge T. J. Sparks qualified as mayor, and appointed Messrs. J. A. Shaver and John F. Shutt on the street committee. The meeting for the appointment of treasurer, clerk, marshal, night watchman and assessor Monday night.

An Expensive Photograph.

Messrs. Irvin and Gilman, local agents for the Ford Motor Co., are showing in the window of their sample room what is said to be the most expensive photograph ever made. It shows the 15,000 men employed in the manufacturing department, and each man lost two hours from work, for which he got full pay. Other photographs show one day's output of 1,000 Ford cars, and the office force of the company. There are more people in the office force than the entire number of people employed by a great many concerns which make automobiles. But there is nothing in the world with which to compare the Ford Motor Co., as it outranks any concern in the line by many leagues.

Dr. T. L. Bailey, who is taking special work in New York, was here a few days the first of the week, shaking hands with old friends. He is making a short visit to his old home at White Plains, and will soon return to New York.

W. H. Gray Wins First C. E. Park Second Prize.

The drifting balloon which has attracted so much attention to the window of C. M. Howard & Co., where it has been since the first of the year, yielded its last drop of liquid shortly after noon Tuesday, and Messrs. E. E. Reno and Orien L. Roark, who were chosen judges, opened the ballot box and went over the hundreds of coupons. The actual time of the emptying of the balloon was 47 hours, 21 minutes and 40 seconds. Guesses ran all the way from forty minutes to 116 hours, but Mr. W. H. Gray, who guessed 47 hours and 25 minutes won first prize, a set of 1847 Rogers table spoons. Mr. C. K. Park won second prize, a set of tea spoons, by his guess of 47 hours, 16 minutes and 26 seconds. Mr. Howard is well pleased over the interest taken by our people in the affair, and of course the winners are delighted with the gifts.

Josh Crowe, Charged With Murder in Ohio County, Brought Here.

Josh Crowe, a well known Ohio county farmer, was brought here and lodged in jail Monday night. He is charged with the murder of J. E. Johnson, who was killed the first day of the year near Knott's Ferry, on Rough river, but his body was not found until Monday morning, when the river was dragged. The two men had a difficulty about a year ago, and had never gotten over it. Feeling ran high, and the officials brought Crowe here for safekeeping, as there was fear of a mob.

A gang of wild geese passed over Monday morning, en route South, which indicates that some real winter weather is on tap.

Rev. Hudspeth, of Hopkinsville, arrived yesterday afternoon, and will preach at the Christian church for a few days. He is well known here, where he has been on several occasions, and has a wide circle of friends and admirers. He is a fluent, forceful speaker, and one of the leading preachers in this section.

D. Ward King Epigrams.

Good roads are a matter of good heads; get the heads of the people right and the roads will take care of themselves.

The best material for filling a mud hole is mud.

The sort of a drag you use doesn't make so much difference; anything you can hitch a team to will make the roads better, if you have a man to drive it.

Let the man alone who won't drag his road. He has his reward—the neighbors sneer at him, his doctor throws it up to him, and once in awhile an ungrateful traveling man curses him.

The more a road is rounded-up in the middle, the better it will stand up through a wet spell.

Nine times out of ten a man doesn't drag his road for fear someone he doesn't like will get the benefit of it.

You can't poison a hog, and some men won't take the good roads fever.

Some people want their corn shelled. You can't have a rounded-up road and one that the horses won't slip on when wet.

If people of the cities and towns maintain their streets at their own expense, and pay on an average of one-fourth of the maintenance of country roads, farmers should gladly give the two or three days a year that would be required to build and maintain perfect highways.

Since cities and towns, and various public service corporation of the country pay in hundreds of millions of dollars annually in taxes, from which road working budgets are deducted, it would seem only just that the land owners should be willing to maintain the roads at their expense. I have built and maintain a mile of road along my land at my own expense, and there is not a better mile of dirt road in the world, and few pikes equal it. The amount of time and labor is small, but the satisfaction and economy are vast.

Mr. T. O. Jones has opened a law office in the west room of the Y. M. C. A. building, first floor, and will practice his profession here.

Yesterday was the first day in more than two weeks that the sun has been seen here, and it was not very distinct much of the day at that.

New Officials Sworn In Monday.

Muhlenberg county has a new set of officials, with the exception of Judge. The oath of office was taken Monday, and the following men are now on duty:

J. J. Rice, county judge, succeeding himself; W. H. Gray, county attorney, succeeding T. O. Jones; J. Leo Fentress, county clerk, succeeding H. L. Kirkpatrick; Miss Amy M. Longest, County school superintendent, succeeding J. E. Shaver; Robert Wickliffe, sheriff, succeeding T. L. Roll; Charles Stovall, jailer, succeeding George York; George Young, coroner, succeeding C. R. Lewis; Andy Glenn, assessor, and C. J. Rice, surveyor. The Fiscal Court will be composed of Roll, Long, Langley, Hill, and Gossett, named in the order of the magisterial district they represent.

Mr. J. S. Miller will leave Monday for Florida, where he will spend several weeks.

Nightmare.

A nightmare is a very vivid and disagreeable dream, in which the sleeper finds himself in various terrifying situations from which there is no escape. When the sufferer's fright reaches a climax, he awakens suddenly; sometimes he is aroused by his own efforts to scream for help. A bad form of nightmare occurs in young children; it is called "night terror." The child awakes suddenly from a deep sleep, panting, wide eyed, screaming but inarticulate, and clings frantically to anyone who goes to the bedside. Such attacks are most common in children between four and eight years old, but they may occur at any age.

When grown-up people have nightmare, it is generally owing to indiscretions in diet, such as mince pie or lobster eaten late at night. Many persons have to be very careful about what they eat for supper, and can never safely go to sleep lying flat on the back.

One characteristic of nightmare is the startling reality of it. It lacks the misty vagueness of pleasant dreams, and has, while it lasts, all the sharp outline of an actual occurrence. Therefore it is important that young children should be wisely and gently handled when they suffer from night terrors. Do not scold them, or laugh at them, or argue with them. They have suffered a real shock with a consequent loss of nervous force. Until the paroxysm has spent itself, do not leave a child who has suffered in this way alone.

Sometimes, in older children, nightmare accompanies overpressure at school, and tendency to disappear in the holidays. In such cases lighten the pressure of work as much as possible, make the evening meal light and digestible, and keep the child from excitement during the few hours before bedtime.

Pointed Paragraphs.

It is hard luck that comes easiest. Only very young men understand women.

The richer a man is the richer he wants to be.

Most women wouldn't want their own way if they could have it.

It's difficult for the average man to live up to the opinion he has of himself.

Not even an expert aurist has ever discovered a woman who was deaf to flattery.

But a man's vanity never offends a woman if she can play on it to her own advantage.

A heavy weight sweetheart works havoc with the freshly tailored creases in a young man's trousers.

A girl should never marry a young man until she knows all about him then the chances are she'll not care to.

What has become of the old fashioned young man who used to make good by marrying his employer's daughter and succeeding to the business.

The mercury has been hovering right about the freezing point. There has never been known such a spell of weather as we have had for three weeks, as there has not been a change of more than five degrees in temperature, no matter what kind of weather we have had or from which direction the wind came.

Mr. J. A. Rose was in Hopkinsville this week, where he went for treatment by a specialist, one eye being affected by neuralgia.

G. E. Countzler is headquarters for LIV-VER-LAX.

A WORD TO DRIVERS

If every driver of a vehicle would take a **DIFFERENT** space on the road from that traveled by another, the whole road surface would be packed, no ruts would be made, and every part of the road would be available. The rut is the cause of road destruction. If YOU want to help make good roads

AVOID THE PATH OF OTHERS!

Henry Ford Gives Employees Ten Million Dollars

Henry Ford, president and principal owner of the Ford Motor Car Co., of Detroit, made an announcement a day or two ago that has caused the widest attention in the commercial world. Increases in wages have been made to the 26,500 people employed by the company which will amount to \$10,000,000 for this year. The working hours have been reduced from nine to eight hours, and the minimum wage of \$2.34 per day has been raised to \$5, with other wages raised in proportion. It is planned to build 250,000 cars this year, and 5,000 men have just been added to the factory force.

A. S. of E. Pooled Tobacco Sold.

The pooled tobacco of the American Society of Equity, amounting to about a million pounds, has been sold to Martin, Puryear & Co., at prices considered quite satisfactory, an advance being secured over last year's prices. Delivery has been strong for the past week, and will continue heavy as long as the season lasts.

The new council has ordered two carloads of stone, and will get more as needed. The streets will be put in good condition, and there is a movement on foot to raise funds by private subscription to buy one carload. Many teams have been offered to haul the stone, and it is hoped a vast amount of work may be done. Owing to the financial condition of the city, it will be necessary for many persons to help, if we are to have what work done that is needed.

Have You a Liver? IF SO USE LIV-VER-LAX

Read Following Statement From Prominent Greenville Druggist

We have recently received a large shipment of GRIGSBY'S LIV-VER-LAX, the liver medicine which we recommend above all others. When troubled with constipation, or a disordered liver, do not take calomel or other harsh physics to derange the system, but let us supply you with a bottle of LIV-VER-LAX on our personal guarantee, that is, if it does not do all that we claim for it, and if you are not perfectly satisfied we will cheerfully refund your money. A sluggish and inactive liver is the cause of most all diseases. Keep your bowels open and liver regulated with LIV-VER-LAX and you will not be sick. LIV-VER-LAX is purely vegetable, is pleasant, safe and effective, and is good for grown-ups and children all alike. We have unbounded confidence in LIV-VER-LAX, is why we recommend it so highly. We believe LIV-VER-LAX has given more universal satisfaction than any other liver medicine we have ever sold.

METHODS OF SPRAYING TREES
Maine Experimental Station Finds Combination Which May Be Used With Perfect Safety.

In response to numerous requests for information on the subject of preparing and use of lime-sulphur in orchard spraying, the Maine agricultural experiment station has issued a bulletin which goes into the matter quite fully. It says in part:

During the past few years there has been a marked change in the methods of spraying apple trees, the most important being a general substitution of lime-sulphur for bordeaux mixture as a fungicide. There is probably no better material than bordeaux mixture in use today for the control of apple scab, but unfortunately it is frequently the cause of serious damage to both foliage and fruit. The weather conditions are right. The circular gives a list of a large number of varieties of apples with the relative resistance of each to this spray. It is not recommended that orchardists who have been using bordeaux mixture successfully on resistant varieties change to lime-sulphur. On the other hand, those who have experienced any difficulty with it, or who are growing varieties known to be susceptible to

Sitting Limb Wash to Prevent Clogging Nozzle.

this spray, or who are uncertain whether or not bordeaux mixture may be safely used on the varieties they have, are strongly advised to use lime-sulphur. This station has found that this latter in combination with perfect safety on the Ben Davis and Baldwin apple trees, while bordeaux mixture applied at the same time and in the same manner resulted in injury to foliage or fruit or both.

For the small grower or the man with but few trees it is doubtless more satisfactory to purchase one of the standard brands of commercial lime sulphur concentrates, but for one with an orchard of any size it is entirely another matter. He should purchase the raw materials and prepare the concentrate at home. The circular in question gives detailed instructions how to prepare home-cooked lime-sulphur, how to test this with the hydrometer to determine its density and gives tables for dilution of different densities for dormant sprays and for summer spraying. This latter information is also valuable to the man who purchases one of the commercial brands of lime-sulphur. The density of this also should be determined in the same manner and diluted according to the tables.

Strawberries.

The growing of the strawberry is important on the farm because it is one of the best fruits that can be grown, coming in at a time of the year when it will supply the place that nothing else will supply on the table, and we, as farmers, ought to have the best we can grow upon the farm, and a liberal supply of strawberries every year, a good, liberal planting every year, will do much toward making farm life more pleasant, more congenial, and give us something that is valuable on the table for three or four weeks.

Yield Depends on Care.

The strawberry is a plant that can be made to produce anything from one hundred to one thousand dollars worth of fruit per acre, according to the kind of work you put on it. If you choose a good rich soil, say plowing under a crop of clover, then heavily fertilizing with well composted manure and giving it careful cultivation through the entire season, you will have your ground in a condition to produce any amount of fruit.

WHEN CLEANING HOUSE

SIMPLEST AND QUICKEST METHODS OF DOING THE WORK.

Housewife of Experience, of Course, Has Her Own Manner of Doing Things, but These Hints May Be of Value.

For those who have put off their housecleaning from the spring to the autumn the time of reckoning has finally arrived. Perhaps a few words as to the simplest and quickest way to get through this period of trial may be welcome to many housewives.

If you own a house start at the top and work downward. If you are a flat dweller, begin in the room farthest away from the hall door, always leaving the kitchen until the last.

One direction applies to every room in the house. First take down all hangings and draperies. The carpets, too, must come up. If any of these are to be replaced by new, the old coverings should be immediately sent to the laundry or cleaners. If not, they should be carried out of doors and given a thorough brushing and beating.

Next, all pictures and ornaments should be removed from the walls and thoroughly dusted and cleaned. These should then be piled in a safe spot and covered from the dust.

After this the floor should be well swept. When this is finished the hall should be swept off with a clean broom twice, then gone over with a duster.

The door should be brushed lightly to collect such dirt as may have fallen from the walls. Chairs which are stuffed should be thoroughly beaten with a bamboo bat, and then the wood-work on them polished. For the fine furniture, which may be spoiled by a polish of beeswax or turpentine, a good furniture cream should be used, but this should be tried very carefully before using on fine woods. Also a perfectly dry silk cloth should be used. For dining-room furniture the old-fashioned mixture of turpentine and beeswax is better than anything else. For leather covered chairs this is much better and safer than any new-fangled concoctions you may be persuaded to buy.

If there is a fireplace in the room this should be well cleaned and the hearth well enameled.

Then scrub the floor thoroughly, using a strong carbolic soap and hot water. When the floor is perfectly dry the clean carpet may be put down and the stretches of floor which surround it should be well polished with plenty of beeswax and turpentine.

All cushions should be beaten out of doors before being returned to their accustomed place.

The pictures should now be rehanging, the windows cleaned and fresh curtains put up.

If the housewife will try one room at a time in this manner she will see that even the men in the family will not complain, for they will not know that housecleaning is going on.

Blackberry Jam.

For blackberry jam allow three-quarters of a pound of sugar to a pound of fruit. Mix the sugar with the fruit and set it on the back of the stove. Let it stand there until the juice begins to show. Press the fruit occasionally with a spoon to start the juice. Then bring the mixture forward over the fire and let it cook for an hour, stirring it almost continually to keep it from burning. It should cook rather quickly. When very thick pour it into marmalade jars and let it stand for 24 hours before covering it with paraffine in the usual way.

Cheap Cake.

One cup of sugar, 2 tablespoons of butter creamed together, 1 egg, 1 cup milk, 2 teaspoons baking powder sifted in 1½ cups bread flour. Flavor to suit. Use this for a foundation for several cakes. Use 2 tablespoons of cocoa, flavor with vanilla, frost with white frosting and you have a good dark cake; or put in a cup of shredded coconut and it makes a nice cake for a change.

Blueberry Shortcake.

Two cups flour, two teaspoons of baking powder, two tablespoons butter, two-thirds cup sugar. Work all these ingredients together. One egg and milk enough to make like biscuit dough. Roll out and put in a pan and bake about half hour. Delicious.

Suggestions for Ironing.

It is of great advantage when sprinkling clothes to use warm water instead of cold. Warm water covers a larger area than cold, and when ironing is started you will find the cloth evenly damp. In using cold water the dampness only occurs in spots.

Sweetening With Salt.

A cook recommends the addition of a very little salt when cooking very sour fruit such as cherries or cranberries. She says that only about one-half as much sugar will be required then as would otherwise be needed.

For Ink Stains.

The stains of typewriting can be removed from linen by soaking in turpentine for 24 hours—then pour boiling soda over the inked parts, rinse and dry.

When You Cook Cabbage.

The unpleasant odor which cabbage and cauliflower make while cooking can be avoided by dropping a couple of whole English walnuts into the kettle.

TYPICAL OF SEASON'S HATS

Has Lines That Are Original and Modish Without Any Undue Exaggeration.

In harmony with the season's other daring modes the hats are dashing and unusual. The woman whose hats are few must walk warily among the pitfalls of bizarre shapes and trimmings lest in an unguarded moment she fall. Smartness she may have, but extremes are the prerogative of the woman with an extensive wardrobe. The lines of the hat shown here are original and modish without exaggeration. This hat has a stiff brim and crown covered with deep purple velvet, the crown bowl shape, the brim

In the Latest Style.

rolling slightly on the edge. About the crown is laid a flat band of self-tone velvet with triple bow placed diagonally below a smart wing in the same shade of purple.

HOLDS THE VEIL IN PLACE

Ribbon Is Better Than Any Kind of Pin, and Certainly Looks Much Prettier.

After the manufacturers have made all kinds of wonderful novelties in the way of pins to hold veils in place and people have spent much money for the pretty affairs and found that their veils are torn even more easily than when a common hairpin is used to keep the veil ends in place, some wise person, says the New York Sun, has discovered a feasible arrangement.

Buy a piece of grosgrain ribbon the length of your veil of the same color as the veil, although black ribbon is effective with any color veil. Sew it carefully along the lower side of the veil, being sure that the soft lace or mesh does not full. Then from the center of the ribbon measure half the size of your neck and sew a tiny clasp. From the other half sew the opposite side of the clasp. Now you have an effect of a black ribbon around your neck, if a low collar is worn.

To put the veil on the hat first put around the neck and fasten the clasp, then take the two ends and draw up on the hat, drawing the veil into place as heretofore. It will be very neat and there will be no raw edge. This new idea increases the wear of the veil and keeps it fresh looking as long as it lasts.

The very latest word in veils is a pale lavender with strange black figures that seem only to be on the surface of the mesh.

At most shops the ribbon will be sewed on by machine when the veil is purchased if the customer desires it.

IDEAL DESIGN FOR THE BELT

May Be Crocheted Either in Silk or in Linen Thread, Using the Afghan Stitch.

Crocheted either in silk or in linen thread this makes a very satisfactory belt. For the linen thread use No. 20, with steel hook size one.

Make a chain stitch of 25 sts, turn. Miss first stitch, then take up every following stitch and draw thread through, keeping all on hook.

Take up thread and draw through two sts, then again, and draw through two stitches, repeating until all are worked off.

Take up the sts again, putting the hook under each of the little upright loops, being sure not to miss the one at the end.

Continue in this way, taking up and working off, until the belt is of length desired. Add any buckle that is liked.

The belt may be made as wide as desired by making the foundation chain longer or shorter. Line the belt if wished. If made in the linen thread, use cream, gray, black or white thread. The stitch will be found very suitable for a belt worked either in linen or in silk.

Perishable Materials.

Everything nowadays, except lace and jewels, seems to be perishable in very short space. Tulle, chiffon, silk velvets and taffetas moire have no stamina, and even furs are dressed and cut about to such an extent that they are utterly fragile. And yet, with all this, we are progressing toward common sense in our way of dressing. We no longer tight lace, we need not pinch our toes, it is very bad taste to wear a glove a size too small, and we wear much less false hair than we did a year or two ago.

Our Name

has been before the public for 30 years, most of the time right on the spot where we are now located.

Our Aim

constantly has been to sell the best goods in our lines, at the most reasonable prices. Our services are of the highest grade, our wares the best, and our equipment compares with the best of the larger cities. We endeavor constantly to increase our usefulness.

Our Claim

On your patronage is based on a service the duration of an ordinary life time, and a square deal assured every one. The accumulated experience and knowledge of this third of a century are at your command.
